Closing: Crack the Jar	23

Introduction: The Jar in the Desert

In December of 1945, an Egyptian farmer named Muhammed al-Samman was digging near the cliffs of Jabal al-Tarif in Upper Egypt when his shovel hit something hard. It was a sealed jar, buried in the sand. Inside were twelve leather-bound books -- papyrus codices, sixteen centuries old, written in Coptic, containing fifty-two texts, most of them unknown to any living scholar.

Somebody buried those books to save them.

Here's the part they don't teach in Sunday school: the Bible you hold didn't fall out of the sky in its current shape. For the first three hundred years of Christianity, there was no official list. Churches read all kinds of books. Some read the Shepherd of Hermas. Some read the letters of Barnabas. Some read Enoch -- the book that tells you what actually happened in Genesis 6, the one the New Testament itself quotes as prophecy.

Then in the year 367, a bishop named Athanasius of Alexandria wrote his annual Easter letter -- his 39th -- and in it he published the first surviving list matching today's twenty-seven-book New Testament exactly. "In these alone," he wrote, "the teaching of godliness is proclaimed. No one may add to them, and nothing may be taken away from them."

He also condemned the use of non-canonical books.

One leading hypothesis is that monks from a nearby Pachomian monastery buried the codices after Athanasius's letter condemned non-canonical books -- though scholars debate this, and the letter itself ordered no burnings. What isn't debated: somebody thought these books were worth saving.

Understand something: the Council of Nicaea in 325 -- the famous one -- had nothing to do with the canon. That's a myth. Nicaea was about the nature of Christ (the Arian controversy). The canon was settled the way most power works: slowly, by the winners, over centuries of argument, and finally by official lists backed by institutional muscle.

The canon is the version the winners could live with. The jar in the desert is the rest of the story.

This book is about seven texts that didn't make the cut -- or made it in some churches and not others, or were actively suppressed. I'm going to tell you what each one actually says, in plain language. No seminary degree required. No Greek required. Just the stories, the reasons they scared the institution, and the wildest parts.

Read them and decide for yourself. That's the whole point. Athanasius published his influential list in 367 -- full agreement across Christendom took centuries more. You get to make your choice now.

Chapter 1: 1 Enoch -- The Watchers Come Down

What it is: The oldest and most important book that didn't make it. Written between the 3rd and 1st centuries BCE -- centuries before Jesus. Quoted directly by the New Testament (Jude 1:14-15 calls Enoch's words "prophecy," quoting 1 Enoch 1:9 closely -- the wording differs between translations, a close paraphrase rather than word-for-word). Echoed in 2 Peter -- 2 Peter 2:4 draws on the same Enochic tradition of bound angels without quoting it. Cited favorably by Tertullian, one of the early church fathers. Fragments were found among the Dead Sea Scrolls at Qumran -- eleven manuscripts' worth, meaning the community that guarded the scrolls treasured this book. It is still canonical scripture today in the Ethiopian Orthodox Church, which never stopped reading it.

What it says: Genesis 6 gives you three verses: the "sons of God" saw the daughters of men, took wives, and the Nephilim were on the earth in those days. That's it. Three verses, and then the Flood.

Enoch gives you the whole story. Two hundred angels -- the

Watchers, the ones assigned to watch over humanity -- gather on the summit of Mount Hermon. Their leader, Semyaza, is nervous: "I fear you won't go through with this, and I'll pay for it alone." So they swear an oath together, binding themselves with curses, and come down.

They take human wives. The children are giants -- the Nephilim -- who devour everything and turn violent. The marriages were one crime; the other was what the Watchers taught: Azazel teaches men to make swords, shields, and weapons of war. Others teach enchantments, the cutting of roots (herbal sorcery), astrology, the signs of the sun and moon, cosmetics -- the technology of vanity and the technology of killing, handed to humanity all at once.

The earth cries out. The archangels petition God. Judgment comes: Azazel is bound hand and foot and thrown into a pit in the desert, sealed under rocks until Judgment Day. The Flood wipes out the corruption. Enoch himself is taken up and shown the whole cosmic machinery -- the storehouses of the winds, the prisons of the stars, the Son of Man who will judge the world.

Why it was left out: Officially? Questions about authenticity -- was it really Enoch's? -- plus the weird cosmology and the embarrassment of angels having sex. (Augustine blamed its *antiquity*, not lateness.) Unofficially -- and this is the Rook read -- Enoch does something the institution couldn't tolerate: it explains evil as coming from *rebellious heavenly powers*, not just human sin. That's a dangerous theology. If the corruption of the world was taught to us by fallen angels, then the problem isn't just that you're a sinner who needs the church -- the problem is cosmic, structural, bigger than any priesthood. Also, the Book of Parables section describes a "Son of Man" figure in terms so close to Jesus that it made later theologians nervous in both directions.

Augustine -- the most influential theologian in Western Christianity -- pushed the interpretation that the "sons of God" were just the righteous line of Seth marrying the wicked line of Cain. Human, boring, manageable. The angel interpretation, the one Enoch insists on, the one Jude assumed, got buried with the book.

The wildest part: Enoch names names. Nineteen leaders of the two hundred (the Aramaic fragments list twenty), each with his specialty of forbidden knowledge. It's not a vague myth -- it reads like a roster. And the punishment of Azazel -- bound in a desert pit until the end of the world -- is the single most vivid image of cosmic imprisonment in all ancient literature. Somebody read this and decided you couldn't handle it.

Why it matters: If you want to understand what the earliest Christians actually believed about Genesis 6, demons, and the Flood -- read Enoch. It's the missing chapter of your Bible. Jude thought it was prophecy. The Ethiopians still do. The winners disagreed. Now you know what they buried.

Chapter 2: Jubilees -- The Other History

What it is: Written around the 2nd century BCE. Found at Qumran -- the Dead Sea Scroll community copied it at least fifteen times over, which means they treated it as deeply authoritative, possibly even scriptural. Like Enoch, it survived in full only in the Ethiopian Orthodox canon. It's sometimes called "the Little Genesis" because it retells Genesis and part of Exodus -- but with angels narrating, extra details everywhere, and a very different attitude about who's running things.

What it says: An angel dictates the "true" history to Moses on Mount Sinai -- the history behind the history. The big additions: a figure named Mastema, chief of the evil spirits, who actively negotiates with God. After the Flood, Noah prays because evil

spirits -- the restless spirits of the dead giants -- are blinding and leading astray his grandchildren. God orders the angels to bind *all* of them in the place of condemnation. Then Mastema steps forward and haggles: "Lord, Creator, let some of them remain before me... for if some of them are not left to me, I shall not be able to execute the power of my will on the sons of men." And God agrees: "Let the tenth part of them remain before him, and let nine parts descend into the place of condemnation."

Get the referent right, because it matters: the "tenth" is not humans. It's demons. Nine-tenths of the evil spirits get locked up. One-tenth stays on the earth, under Mastema's command, with an explicit job description -- "corruption and leading astray." The tempting of mankind isn't an accident in this text. It's the retained tenth's *assignment*, signed off from the top.

Jubilees also runs on a 364-day solar calendar -- exactly 52 weeks, festivals always falling on the same weekday -- and insists this is the *correct* divine calendar, against the lunar-based calendar used by the Jerusalem priesthood. Calendar sounds boring until you realize: whoever controls the calendar controls the holy days, and whoever controls the holy days controls the religion. This was a power dispute disguised as astronomy.

Why it was left out: It contradicts Genesis on details, elevates angels to co-authors of history, and gives us Mastema -- a Satan-figure who *petitions God, and gets a hearing*. That's not the devil the church wanted. The church's devil is a defeated rebel; Jubilees' Mastema is a cosmic prosecutor with a contract. Also, the calendar war: Jubilees was the scripture of people who thought the Jerusalem priesthood had the calendar wrong. You don't canonize the other team's rulebook.

The wildest part: The negotiation isn't over human souls -- it's over how many demons stay in the field. God downsizes the demon workforce by ninety percent and keeps a tenth on active duty, under middle management, licensed to tempt. The corruption of the world isn't merely permitted here. It's *staffed*. And it reads like a collections settlement because it is one: most accounts get written off into the pit, and a tenth of the collectors are retained to keep working the rest. The receipts are in Jubilees 10.

Why it matters: Jubilees shows you that "the Bible" was never one story -- it was an argument between stories. The winners' Genesis is the short version. Jubilees is the director's cut, with the scenes they trimmed: the angelic narrator, the haggling devil, the calendar the Jerusalem establishment wouldn't adopt.

Chapter 3: Bel and the Dragon -- Daniel, Detective

What it is: The strangest book in this collection, because it *is* in some Bibles. Catholics and Orthodox Christians have it -- it's Daniel chapter 14. Protestants cut it. Jews never included it. Written around the 2nd century BCE, it's two detective stories starring Daniel, and they read like ancient myth-busting pamphlets.

What it says -- Story one: The Babylonians worship a god named Bel, and every day they leave out massive offerings of food and wine for him. The king asks Daniel why he won't worship Bel. Daniel says: gods don't eat. The king says: this one does -- look, the food is gone every morning. Daniel's move: he has the servants spread ashes on the temple floor, seals the doors, and leaves. Next morning the food is gone -- but the ashes are full of footprints. Men's footprints. Women's. Children's. The priests had a secret tunnel and were sneaking in at night to eat the god's dinner. The king has them executed, and Daniel smashes the idol.

Story two: There's a dragon the Babylonians worship -- a living

one. The king tells Daniel: you can't say this one doesn't exist, it's alive. Daniel says: give me permission, and I'll kill the dragon without sword or club. He boils up cakes of pitch, fat, and hair, feeds them to the dragon, and the dragon bursts apart. Then Daniel gets thrown in the lions' den for destroying the people's gods -- and survives, fed by the prophet Habakkuk, who gets airlifted in by an angel carrying lunch.

Why it was left out (by Protestants): The Reformers cut the whole Apocrypha section as non-authoritative -- late composition, no Hebrew original found, too legendary. But notice what got cut with it: a story about *priests faking miracles to eat the offerings*. A story about a prophet proving the clergy is running a scam. You don't have to be a conspiracy theorist to see why an institution might be comfortable losing that one.

The wildest part: The ashes on the floor. It's an ancient version of the forensic trick -- Daniel inventing crime-scene investigation to expose religious fraud. And the dragon exploding from pitch cakes is pure folk-tale energy. This book is *fun* in a way scripture usually isn't.

Why it matters: Bel and the Dragon is proof that skepticism of religious authority is itself biblical. Daniel doesn't just pray about the idol -- he runs an experiment. Evidence over authority. The ashes don't lie, even when the priests do.

Chapter 4: The Wisdom of Solomon -- Meet Sophia

What it is: Written in Alexandria around the 1st century BCE, in Greek, by a Jew steeped in both Hebrew tradition and Greek philosophy. It's in Catholic and Orthodox Bibles. Protestants cut it. And it contains the most developed portrait of *Sophia* -- Wisdom personified as a woman -- in all ancient literature.

What it says: Wisdom is not an abstract idea here. She is a person -- female, active. Proverbs calls her God's "master worker" (8:30) and pictures her crying out in the streets (1:20); the Wisdom of Solomon develops her further in chapters 7-9. She saves, guides, teaches, rescues. Read the Wisdom of Solomon straight through and she does much of what the New Testament later assigns to the Holy Spirit: she fills the world, renews all things, enters holy souls

and makes them prophets -- and that's the Rook read on the parallel.

And here's the grammar they don't mention in church: in Hebrew, *ruach* -- spirit, breath, wind -- is a feminine noun in the great majority of its occurrences. Grammatical gender isn't personal gender, but the feminine is right there in the grammar. The gender shifted with translation -- Greek *pneuma* is neuter, Latin *spiritus* is masculine -- and by the time theology was being done in Latin, the Spirit had become a "he." The feminine didn't fall out. It was translated out -- that's the Rook read, and the grammar backs it.

The early church knew. Syriac Christianity -- some of the oldest Christian writing outside the New Testament -- is full of feminine Spirit imagery. "God his Father and the Holy Spirit his Mother" -- that's Aphrahat, a 4th-century Syriac writer (*Demonstrations* 18). Then it faded as the church became Roman, imperial, patriarchal -- the institution's motives are my read; the grammar is the evidence.

Why it was cut (by Protestants): Same Reformation logic -- no Hebrew original, late date. But step back and look at the pattern: the book that most clearly presents the divine as feminine is the one that keeps getting dropped. A male priesthood ended up with a male-sounding God, and the feminine got filed down to "the Church is the bride" -- the only feminine left is the subordinate one.

The wildest part: Wisdom 7 describes her as "a breath of the power of God, a pure emanation of the glory of the Almighty" -- language so exalted that early Christians used it to describe Christ, while the feminine grammar sat right there in the text, unnoticed or unmentioned.

Why it matters: If you've ever felt the Trinity sounds like three dudes, this is why -- and it wasn't always so. Sophia was there at the beginning, crying out in the streets. They didn't just hide books in the desert. They hid her.

Chapter 5: The Gospel of Thomas -- The Kingdom Inside You

What it is: The crown jewel of the Nag Hammadi jar. One hundred fourteen sayings attributed to Jesus -- no miracles, no crucifixion, no resurrection narrative, just sayings. Many have parallels in the New Testament Gospels; some don't. Scholars debate the date -- most favor the 2nd century, some argue for a 1st-century core. The Nag Hammadi copy is the only complete text in existence; fragments unearthed at Oxyrhynchus in 1897 and 1903 confirmed its age.

What it says: Saying 3: "The Kingdom is inside of you, and it is outside of you." Saying 77: "Split a piece of wood, and I am there. Lift up the stone, and you will find me there." Saying 22: make the inner like the outer, the male and the female into a single one -- then you will enter the Kingdom.

The whole gospel points in one direction: *you don't need an intermediary*. The Kingdom isn't in the temple, isn't in the priesthood,

isn't at the end of time -- it's inside you, right now, if you have eyes to see. "Whoever finds the interpretation of these sayings will not experience death."

Why it was buried: Read Saying 3 again and ask what happens to a priesthood when the Kingdom is inside everyone. Nothing in Thomas requires a church. No atonement theology, no hierarchy, no clergy dispensing access to God. It's a gospel of direct experience -- *gnosis*, knowing for yourself. An institution built on mediated access cannot survive a text that says the door was never locked.

There's also the gender bomb in Saying 114, where Peter says Mary should leave because "women are not worthy of life," and Jesus replies he'll make her male so she can enter the Kingdom too. Scholars fight endlessly over what it means -- some read it as Jesus defending Mary, others as the text's own patriarchal bargain. Either way, the argument about women is right there in the second century.

The wildest part: "Split wood, I am there. Lift the stone, you will find me there." That's not a metaphor for church attendance. Read it straight and that's panentheism -- God in all things -- in a text attributed to Jesus, buried in a jar for 1,600 years.

Why it matters: Thomas is the control group for the whole canon debate. Same Jesus, same tradition -- possibly the same century -- completely different emphasis. The winners chose the Gospels that built a church. The jar kept the one that said you are the church.

Chapter 6: The Apocryphon of John -- The Blind God

What it is: The most important Gnostic text ever found -- so important it appears in *three* separate copies in the Nag Hammadi jar. Somebody really wanted this one to survive. Written probably in the 2nd century. It's presented as a secret revelation given by the risen Christ to John.

What it says: The cosmos is bigger and stranger than Genesis lets on. Above everything is the invisible Spirit -- perfect, unknowable. From it emanates a whole family of divine beings, including Sophia -- Wisdom herself. And Sophia, acting alone without her partner, gives birth to something malformed: a lion-faced serpent called Yaldabaoth.

Yaldabaoth is ignorant. He genuinely doesn't know anything exists above him. So he creates a world -- *our* world -- and declares, "I am God, and there is no other." Sound familiar? It's the exact claim the God of the Old Testament makes, repeatedly. The Apocryphon's devastating move: *what if the god who said that was telling the truth as he knew it -- because he didn't know he was the child, not the father?*

Humanity, in this telling, carries a spark of the true divine -- stolen, trapped in matter by the blind god and his archons (rulers). Salvation isn't about sin and punishment. It's about *waking up* -- remembering what you are, where you came from, and that the voice claiming absolute authority over you is an ignorant child shouting in the dark.

Why it was suppressed: This isn't a disagreement about details. It's a total inversion. The creator god of Genesis -- the one the entire institutional religion is built on -- is recast as a blind, arrogant lesser being. In *other* Gnostic texts, the serpent of Eden becomes the liberator trying to wake humanity up; here, the liberator is Christ himself, working behind the serpent's back. You cannot run a church on this text. You can only run a church *against* it -- which is what happened: centuries of condemnation, lost books, and finally, for these texts, a jar in the desert.

The wildest part: Yaldabaoth's ignorance is the engine of the whole story. Evil here isn't rebellion against a perfect God -- it's the sincere mistake of a being who doesn't know he's not the top. Every tyrant in history has run on the same fuel: absolute certainty built on incomplete knowledge. The Gnostics wrote the psychology of authoritarianism two thousand years early.

Why it matters: You don't have to believe it to feel its force. The Apocryphon asks the most dangerous question in religion: *what if the authority demanding your obedience doesn't actually know what it's talking about?* Every whistleblower, every defector, every person who ever looked at a robed figure and thought "you have no idea" -- they're all living in this text.

Chapter 7: The Gospel of Mary -- The Disciple They Tried to Erase

What it is: Found in fragments -- a Coptic codex bought in Cairo in 1896 (the Berlin Codex), Greek fragments at Oxyrhynchus. *Not* part of the Nag Hammadi jar. Probably 2nd century. It's the only *surviving* gospel named for a woman, and it puts Mary -- traditionally identified as Mary Magdalene -- at the center of the disciples, receiving secret teachings from Jesus and reporting them to the men.

What it says: After Jesus departs, the disciples are afraid. Mary stands up and encourages them: don't grieve, his grace will protect you. Peter asks her to share the teachings Jesus gave her privately -- "we know the Savior loved you more than the rest." She describes a vision of the soul's ascent past hostile powers. Then Andrew objects -- he doesn't believe it. Peter piles on: "Did he really speak privately with a woman, and not openly to us? Are we supposed to turn around and listen to her?"

And then Levi -- one of the male disciples -- defends her: "If the

Savior made her worthy, who are you to reject her? He knew her completely and loved her steadfastly."

Why it was left out: A woman as the lead disciple, receiving private revelation, teaching the men, defended against Peter himself. In a church that would spend two thousand years debating whether women could even speak in the assembly, this text was radioactive. It's not in any canon. It survives in fragments because somebody, somewhere, kept copying it anyway.

And note the smear campaign that followed: Mary Magdalene -- the "apostle to the apostles" in early tradition -- got recast by Pope Gregory the Great in 591 as a repentant prostitute, a conflation with other biblical women that stuck for fourteen centuries. The liturgy wasn't disentangled until 1969, when the Roman Calendar reform dropped the readings that fused the women together. Fourteen hundred years of slander against the woman Peter tried to silence.

The wildest part: Peter's objection is *in the text*. The gospel preserves the exact moment the patriarchal pushback happened -- men telling the woman with the revelation to sit down -- and preserves Levi telling Peter he's wrong. The argument about women in the church isn't modern. It's in the second century, in a buried gospel, and Mary's side won the argument on the page.

Why it matters: The Gospel of Mary is the receipt. When anyone tells you women's leadership is a modern invention, or that the early church was uniformly patriarchal -- this *codex* kept the evidence. She was there. She taught. They tried to erase her. They failed.

Chapter 8: The New Grimoire -- Technology as Modern Magic

The claim: Strip away the marketing and modern technology functions exactly the way magic always functioned: hidden knowledge, words of power, ritual procedures, a specialist class that mediates between the power and the people, and effects at a distance that the uninitiated cannot explain. Arthur C. Clarke said any sufficiently advanced technology is indistinguishable from magic. He was talking about the physics. The social structure is identical too.

The evidence -- and this part is documented, not mystical:

The jargon gives it away. *Magic numbers. Black magic. Voodoo*

programming. Wizards. Exact strings of words, in precise order, that make things happen -- get one character wrong and nothing happens, or something terrible happens. A command line is a ritual: the words must be exact, the order matters, the uninitiated cannot read them, and the initiated guard them like priests guard liturgy.

Daemons. Your phone and your computer run background entities called *daemons* -- named by MIT's Project MAC programmers in the 1960s after Maxwell's demon, the thought-experiment spirit. Invisible servants, always working, never seen, doing their master's bidding in the dark. The ancients would have recognized them instantly: household spirits, bound to serve whoever knows their names.

The black mirror. You carry a dark glass rectangle in your pocket. You speak to it, and it answers in a voice. It shows you distant places, the faces of people far away, things happening right now on the other side of the world. That is a scrying mirror. Brooker says the show's title is the dark screen you stare into when it's off. Maybe. Or maybe, consciously or not, somebody knew exactly what they were naming.

The golem. In the old stories, the golem of Prague was clay animated by sacred words placed in its mouth -- a being brought to life by language. A large language model is a golem made of mathematics instead of clay, animated by words instead of parchment. Scholars have made this comparison in earnest. The mechanism changed. The shape of the story did not.

Divination. Credit scores, predictive policing, algorithmic feeds -- systems that read hidden patterns in your behavior to foretell what you will do, who you are, what you deserve. The Romans read birds -- and entrails (that was the *haruspices'* department). The moderns read data trails. Augury with better math, and the same uses: deciding fates, justifying power.

True names. In the old magic, knowing a thing's true name gave you power over it. In tech, the exact name *is* the power: the password, the API key, the IP address, the URL. He who holds the true names controls the kingdom. That is why the great breaches feel apocalyptic -- somebody learned the true names, and the wards failed.

The priesthood. This is the one that matters. In every magical system, power concentrated in a specialist class: the ones who could read, who knew the rituals, who stood between the spirits and the people. Today the priesthood wears hoodies. The rituals are called code. The temples are data centers -- windowless, humming, restricted-access buildings full of concentrated power that the public

never enters. And like every priesthood in history, they insist the magic is too dangerous for ordinary hands, while selling you blessings -- apps, feeds, conveniences -- that mostly extract from you.

The difference that isn't: People will say, "but tech is science -- magic was superstition." Granted: the mechanism is real in a way the old magic's wasn't. But functionally, for nearly all of humanity, the distinction collapses. You do not understand how your phone works any more than a peasant understood the priest's Latin. You perform the rituals -- tap here, speak the words, accept the terms -- and effects happen at a distance, governed by rules you cannot see, administered by people you will never meet. Clarke's law is not about physics being magical. It is about *your relationship to the power* being identical to the peasant's relationship to the priest.

The old grimoires said the words were *given*. By spirits, by gods, by dreams. The engineers will tell you -- on the record -- that their best ideas arrived the same way: whole, uninvited, in the shower or in sleep. Kekule *said* he dozed by the fire and saw a snake seize its own tail -- his own account, told twenty-five years later, and historians still argue about it. Family lore says Elias Howe dreamed of spears pierced near the head -- possibly apocryphal, but the pattern is the point. Draw your own conclusions about where the words come from. I will only note that the pattern is very old, and nobody in the temple likes discussing it.

Why it matters: Every chapter in this book was about who controls the story. This is the live one. The new grimoire is being written right now. The priesthood is consolidating right now. And the same ancient move is playing out in real time: concentrate the words of power, make the rituals opaque, tell the masses the magic is too dangerous for them to touch -- while the temple monetizes every blessing. The bishop who published his list in 367 and the executives closing the source code today are running the same play from the same playbook.

With one difference: the jar has not been sealed yet. The words are still learnable. Learn them while you can.

Closing: Crack the Jar

Here's what I want you to take from this book.

The canon wasn't handed down on stone tablets. It was argued over for centuries by people with interests -- and the people with the most interest were the ones building an institution. Athanasius published his list in 367. Somebody buried their library rather than lose it. Both sides knew exactly what was at stake: *who gets to say what God said*.

The ancient texts are all in the public domain. Stick to public-domain translations -- R.H. Charles and the like are free everywhere; some modern translations are still under copyright. Every text I've described, you can read in full, free, tonight:

- **1 Enoch** -- the R.H. Charles translation is old but free everywhere; the Hermeneia commentary by Nickelsburg if you want the deep end. - **Jubilees** -- Charles translated this too; free online. - **Bel and the Dragon** -- it's in any Catholic Bible, Daniel 14. Borrow one. - **The Wisdom of Solomon** -- same, in Catholic and Orthodox Bibles. - **The Gospel of Thomas, the Apocryphon of John** -- James Robinson's *The Nag Hammadi Library in English* is the standard for the Nag Hammadi texts; full translations of both are free at gnosis.org. - **The Gospel of Mary** -- not a Nag Hammadi text; it survives in the Berlin Codex. Karen King's translation is the standard.

Don't take my word for any of it. That's the entire point. The institution's move was to make the list and close the jar. Your move is to open it.

They buried the books. They translated out the feminine -- that's the Rook read, and the grammar backs it. They turned the detective into a footnote and the lead disciple into a prostitute and the Watchers into a metaphor. The suppression is the confession -- whatever they're afraid of, that's where the power actually is.

So read the banned books. All of them. The jar's been open since 1945, and nobody can close it again.
